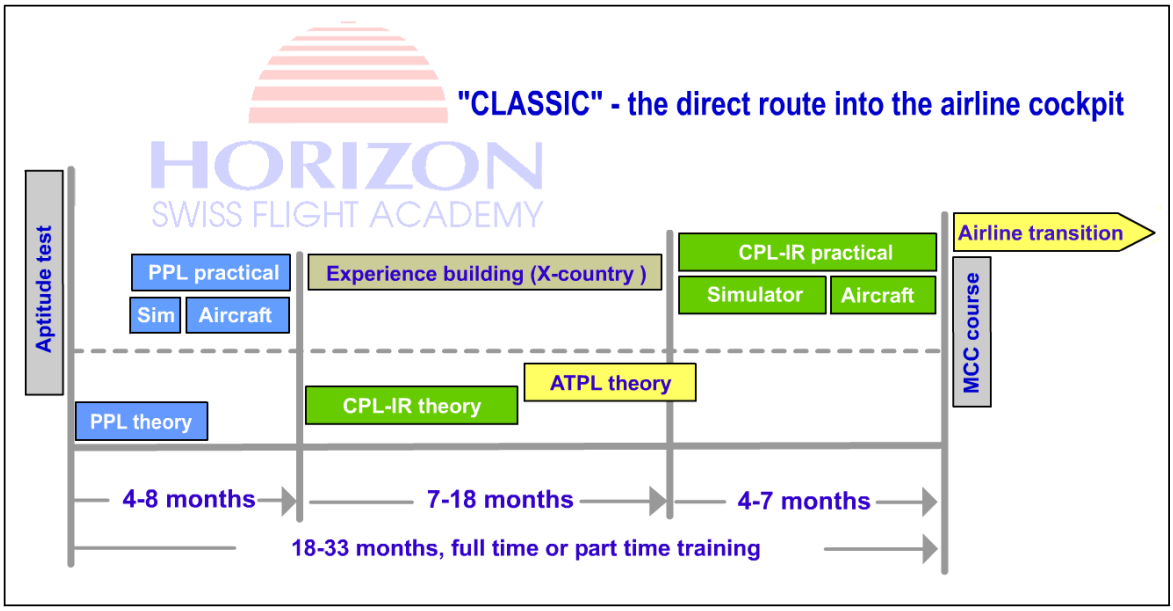
„Classic“ – The direct route into the airline cockpit



The dream of flying - an unfulfilled dream?

With the desire for flying, we associate the crossing of borders, the conquest of the third dimension, a gain in quality for life, enrichment and horizon enlargement - illusions....

We help you to fulfil your dream of flying. As an airline pilot, literally new horizons are opening for you. With our “Classic” training concept, you are able to reach your destination “cockpit” on a direct track.

Many people have wrong ideas of the requirements prospective pilots have to fulfill. No superhuman abilities are necessary, but a strong will to reach the target and to control the aircraft at any time.

If you are minimum 17 years of age, enthusiastic, physically able and characterly suitable, with sound knowledge of English, then you fulfill the essential prerequisites for a successful completion of your training. A comprehensive Aptitude Test prior to training start or upon completion of your Private Pilot Licence gives you additional certainty.

Optimum conditions on the job market

Horizon Swiss Flight Academy possesses the EASA Part-FCL certification as ATO (Approved Training Organization). Thanks to the standardization of the European licence system, training with us leads you directly into the cockpit of European air carriers. The sound, goal-directed training offers best possibilities for the employment with your favorite airline.

The track towards airline pilot

The concept alternates between theoretial and practical training. The practical parts in simulators and aircraft are scheduled when the necessary theoretical knowledge is achieved. Theoretical training may be attended in classroom or distance learning courses.

Theoretical and practical parts are completed with the official examinations of the Federal Office for Civil Aviation FOCA, according to EASA Part-FCL standards.
